

Problem of the Week

Problem C

Flower Powers

Mr. Digne planted five rose plants in a row along one side of his property. He then planted one tulip plant in each of the spaces in the row between the roses. Next, he planted one daffodil plant in each of the spaces between the plants already in the row. He then repeated this procedure with daisies, then marigolds, and finally with lilies. Determine the total number of plants in the row.
